

Abstract

The present invention provides a single cleaning sheet which allows a user to dry clean a surface with a cleaning sheet that attracts dust, dirt, debris and other particles, while providing absorbency to absorb any cleaning fluid used in a subsequent cleaning operation, in particular for stains and other dirt or debris which is not attracted to the cleaning sheet. The cleaning sheet of the present invention has first side and a second side, the first side is on an opposite side of the cleaning sheet from the second side, wherein the first side has the ability to attract and retain dirt, dust, debris and other particles and the second side has the ability to absorb fluids. Also disclosed in a method of cleaning a surface using the cleaning sheet of the present invention.
